

## Acne Reduction

*Multi-Wavelength Intense Light*

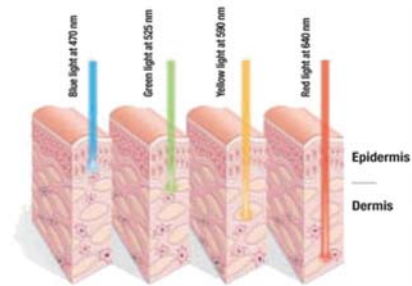

*Before*

*After*

Acne Reduction can be achieved with a multi-faceted approach designed to reduce the production of oil and the population of P-Acne and bacteria that cause the formation of acne.

With the application of a combination of varying wavelengths (colors) of intense light in a series of treatments dictated by the severity of the acne, a patient can expect a significant reduction in the appearance of acne related lesions.
