

## Cellulite Reduction

*Endermology*

*Before*

*After*

Cellulite is a common problem for a large segment of the population. The ability to reduce cellulite through a non-surgical method has become a reality with the advent of Endermology. Endermology is a vacuum assisted mechanical sub-dermal massage.

When combined with specific frequencies of intense light, Endermology can stimulate functions that inhibit the body's ability to store fat and trigger its release (activating the alpha & beta adipocyte receptors).

Endermology requires a number of treatments to diminish the presence of cellulite and sculpt the body. Other technologies have incorporated different frequencies of intense light or ultrasound to enhance results. Endermology is completely non-invasive and requires no anesthetic.
